Command 'Remove Device User'

Command 'Remove Device User'

Symbol: 

Function: This command removes a user from the user management on the target system (device).

Call: Menu bar: *Online* → *Security*

Requirement: You are logged in to the device as a user.

You can manage the device user management in the *“Users and Groups”* tab and *“Access control”* of the device editor. The commands in the *Online* → *Security* menu provide another simple option for protecting access to the target device.

This command opens the *“Remove Device User”* dialog. Specify the user name and password of the user to be removed and click *“OK”* to confirm.

CAUTION!

After performing this action, you can no longer use this removed user account to log in. If this user is the only one on the target system, then a dialog prompt notifies you that this user cannot be removed.
