Operating hours: Control section (0x2B82:01 / P-0-0190 / --)

Function

In this parameter, the operating time of the control section of the drive is displayed. The total duty cycle of the control electronics since supply of the device can be displayed. If an error of status class 1 occurs, the content of this parameter is stored at this time in the first place in parameter "P-0-0193, Error memory operating hours control section".

The value is displayed in seconds and is saved on the control section.
