SMO state machine prof. 1: Max. tol. time for dif. selection (0x3084:05 / P-0-3280.0.5 / --)

Function

The parameter defines the maximum time allowed for the input signals to deviate from the dialing signals. The parameter defines the maximum permissible time during which either no or multiple SMM switches can be activated.

If the maximum permissible time is exceeded, error "**F3141** Plausibility error selection operating state" is generated.
